

## CLAIMS

### QuantWater: Personalized Mineralized Water System – Independent Claim

A system for producing personalized mineralized drinking water, comprising:

a sample collection module configured to obtain body fluid samples from an individual;

an analysis module operable to determine the levels of targeted minerals, vitamins, and bioactive compounds in the body fluid sample;

a computing module configured to calculate an optimal formulation of minerals, vitamins, and supplemental additives tailored to the individual's unique health profile based on the analysis;

a mineralization module configured to accurately blend the computed formulation with distilled water to create a personalized mineralized water product; and

a delivery module configured to distribute the personalized mineralized water to the individual,

wherein the system further integrates body fluid sample data with laboratory services and healthcare providers to facilitate ongoing monitoring and adjustment of the formulation.

### HyperSign: Native HTML Form Integration Protocol – Independent Claim

A computer-implemented method for dynamically creating and integrating interactive web forms within a document, comprising:

detecting a drag action on a selectable HTML element within a source document;

identifying a target HTML element selected from a group comprising table cells, paragraphs, divs, spans, headers, lists, and other display elements;

dynamically embedding a corresponding form field into the identified target element while preserving the document's structural integrity and adjusting display properties for inline or block presentation;

automatically integrating the created form fields with the software's back-end database
